

Backup and Restore OS by Hiren Boot

Requirement

Flash drive

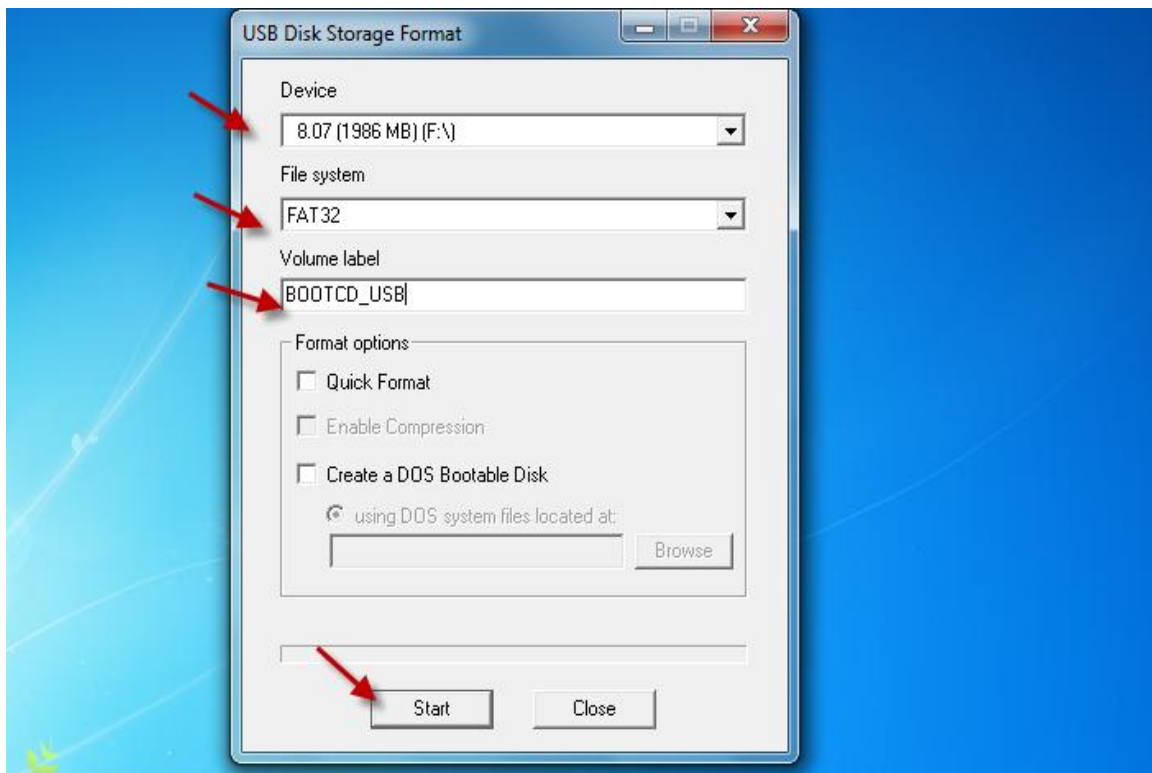

Hiren boot Image

usb_format

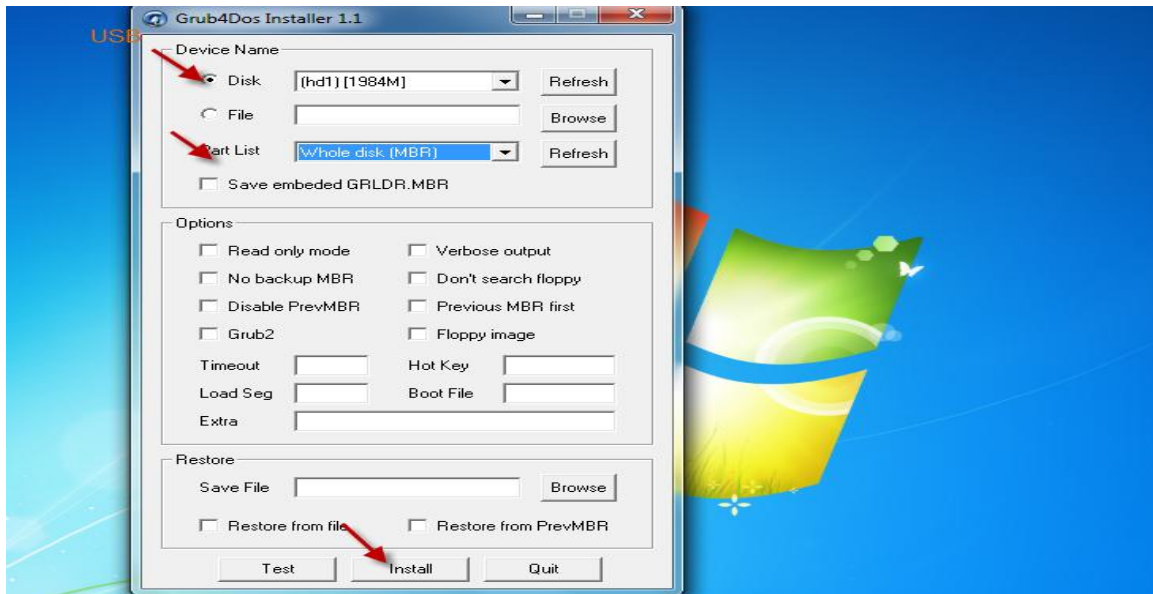

grub4dos

I. Create Hiren Boot Bootable from USB

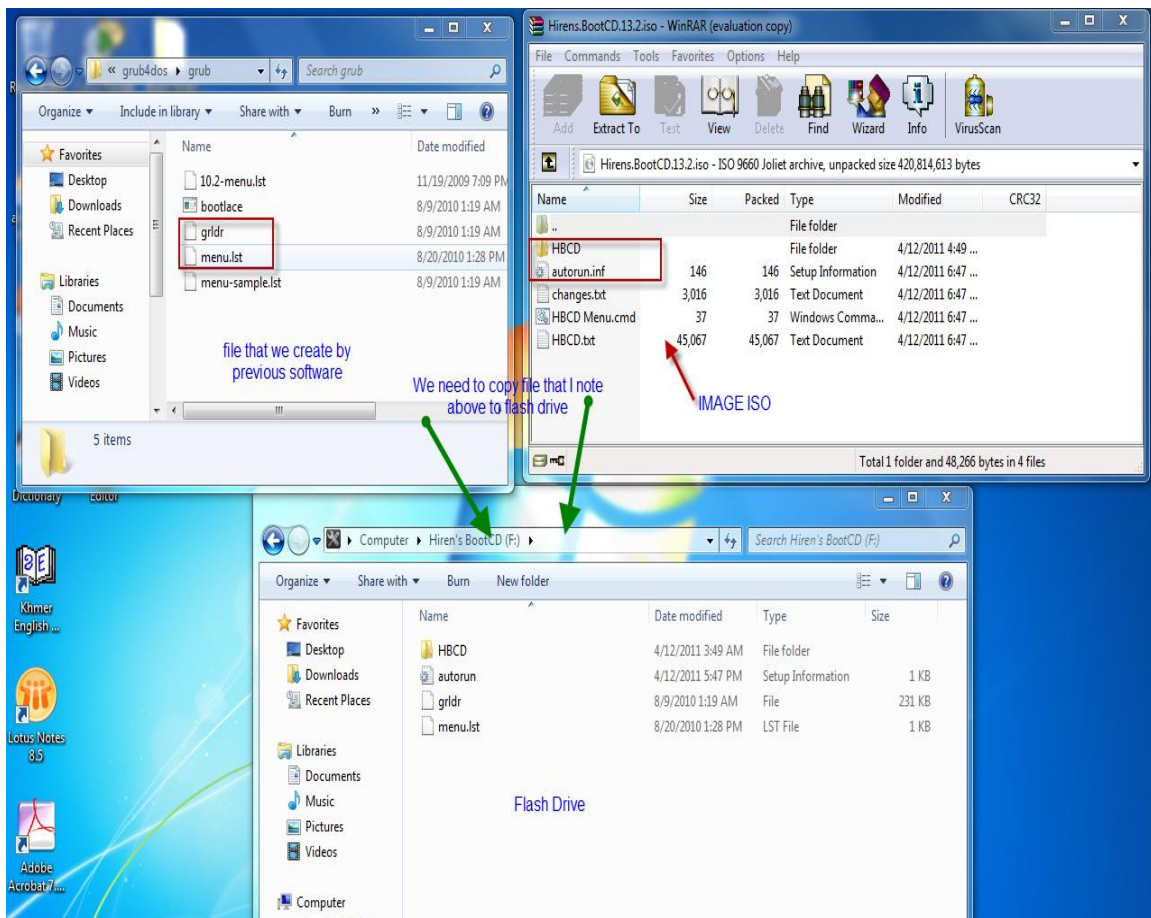

We need to format usb using software USB_format

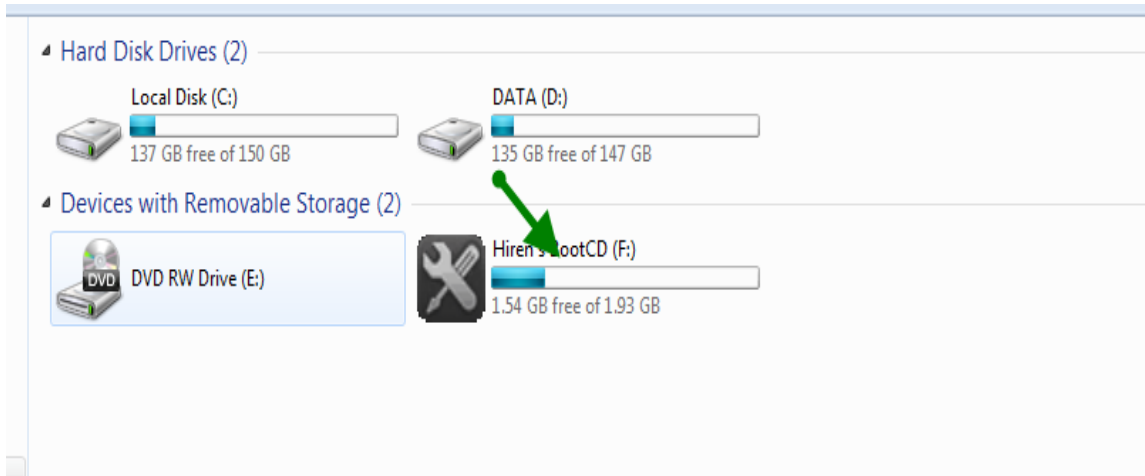

After format flash drive we use software Grub4Doc for create file “grldr” and file “menu.lst”

Copy file to flash

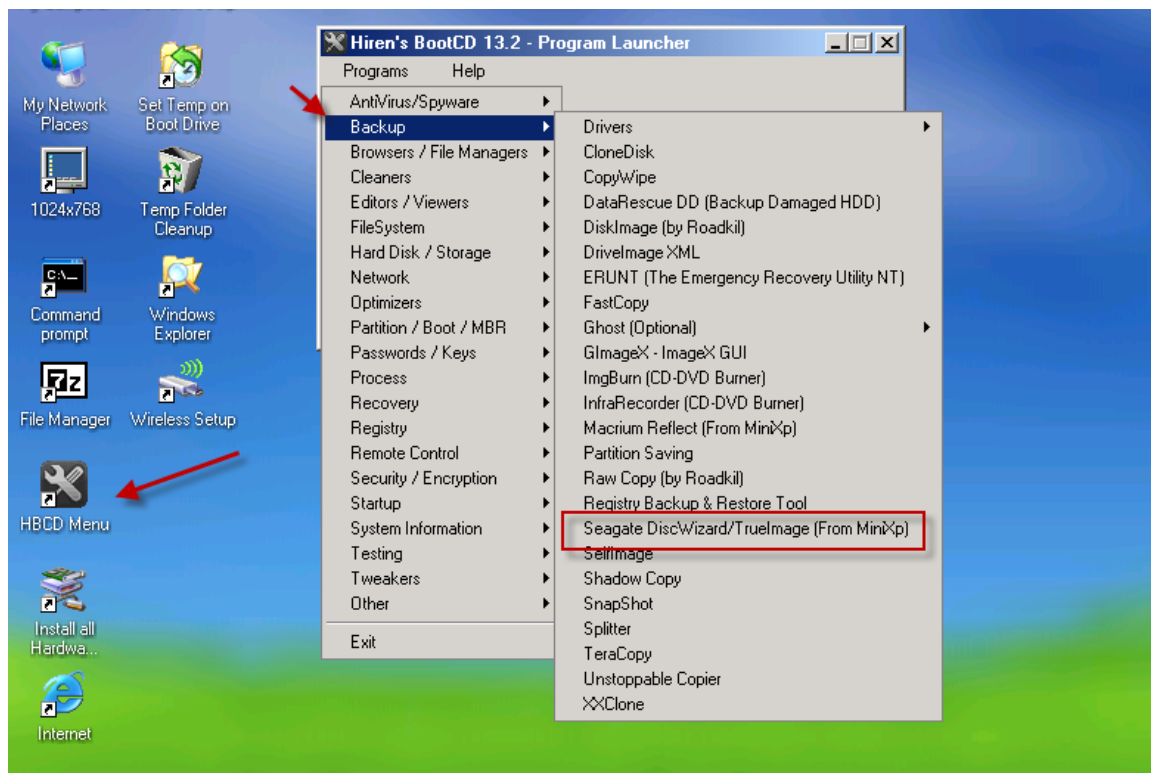

Our flash drive is bootable now

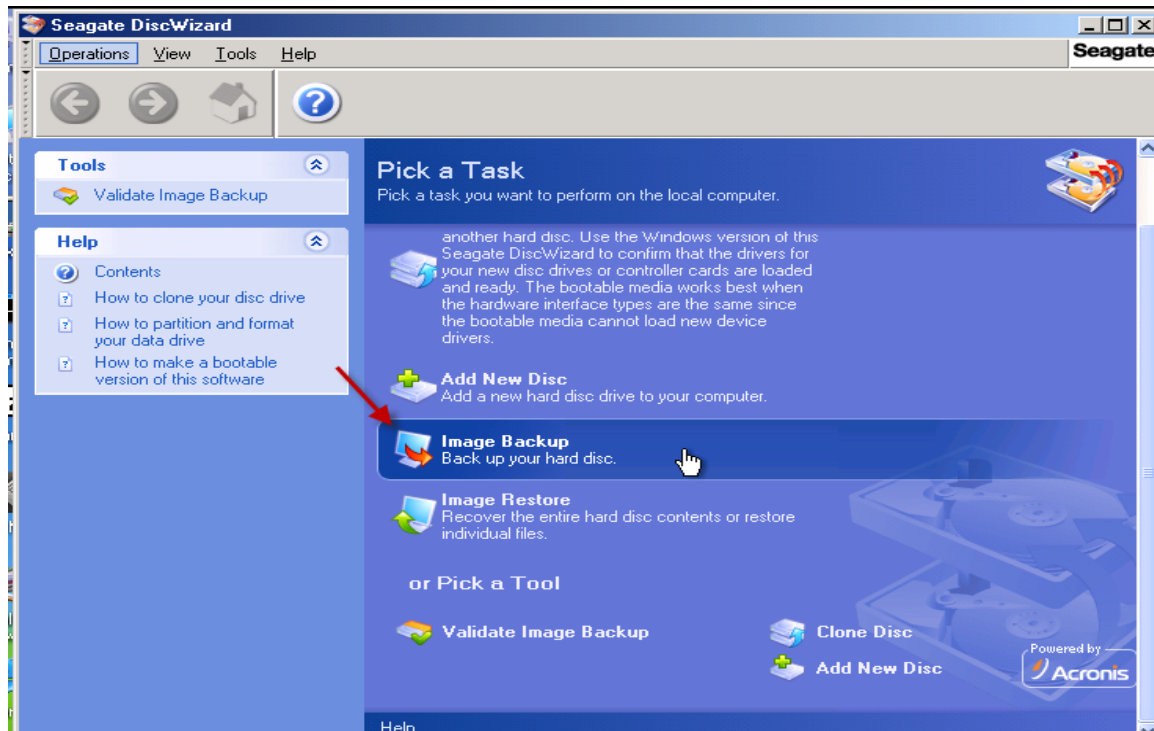

II. Backup system

We could restart our windows and change option boot to flash drive and choose Mini Windows XP

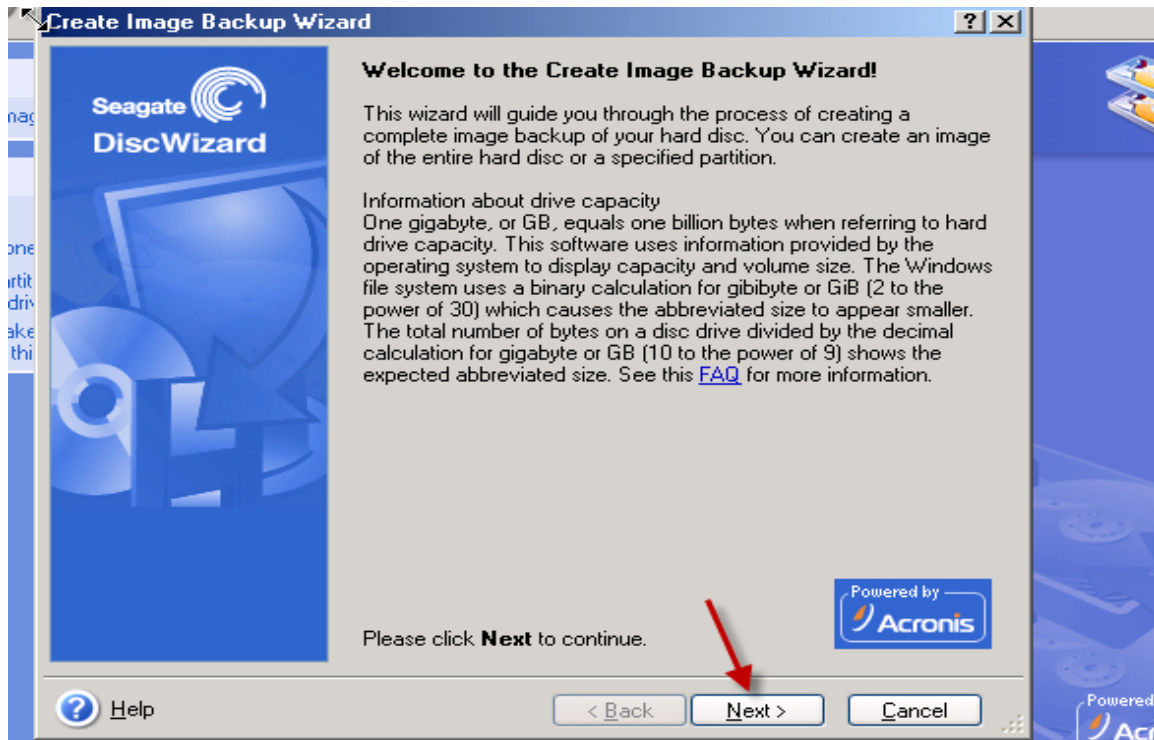

Now we are in Mini windows Xp, we need to following the following step

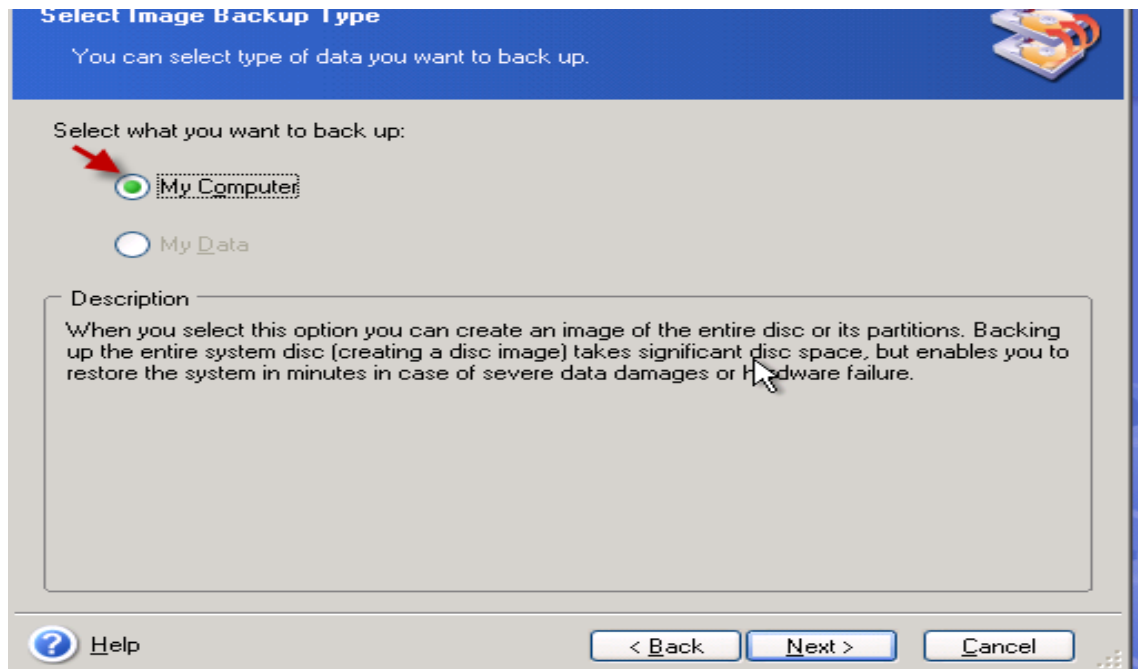

We choose image backup

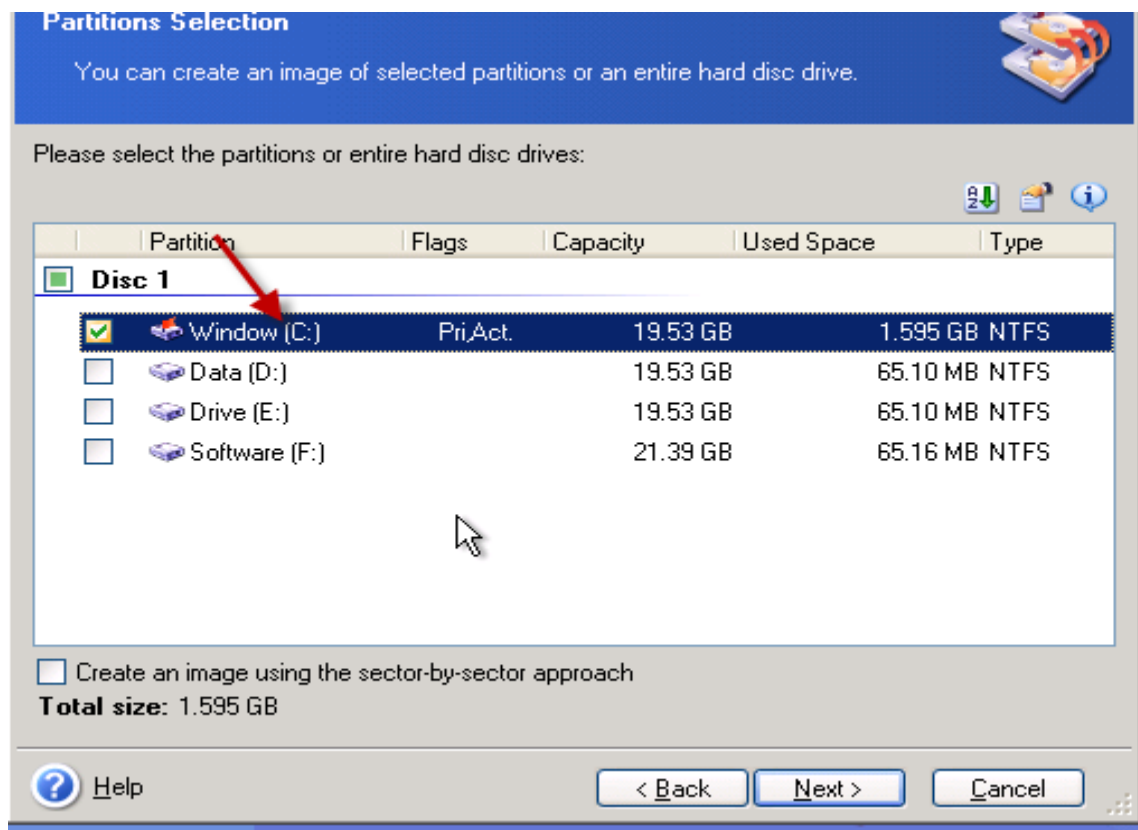

Click next to continue

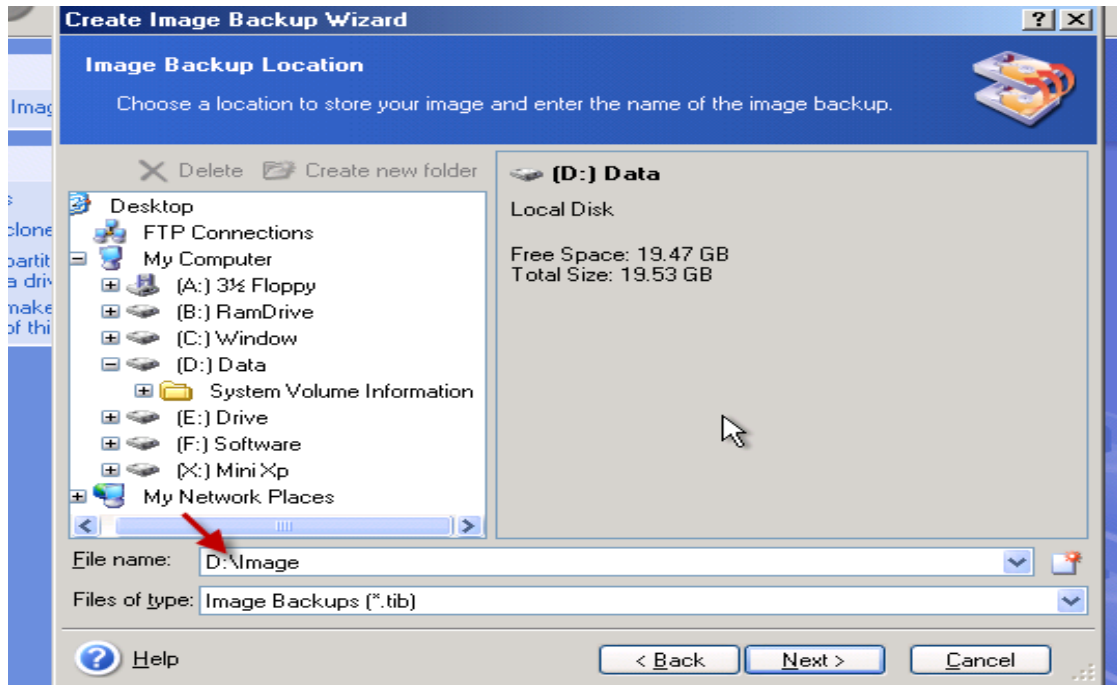

Choose my computer

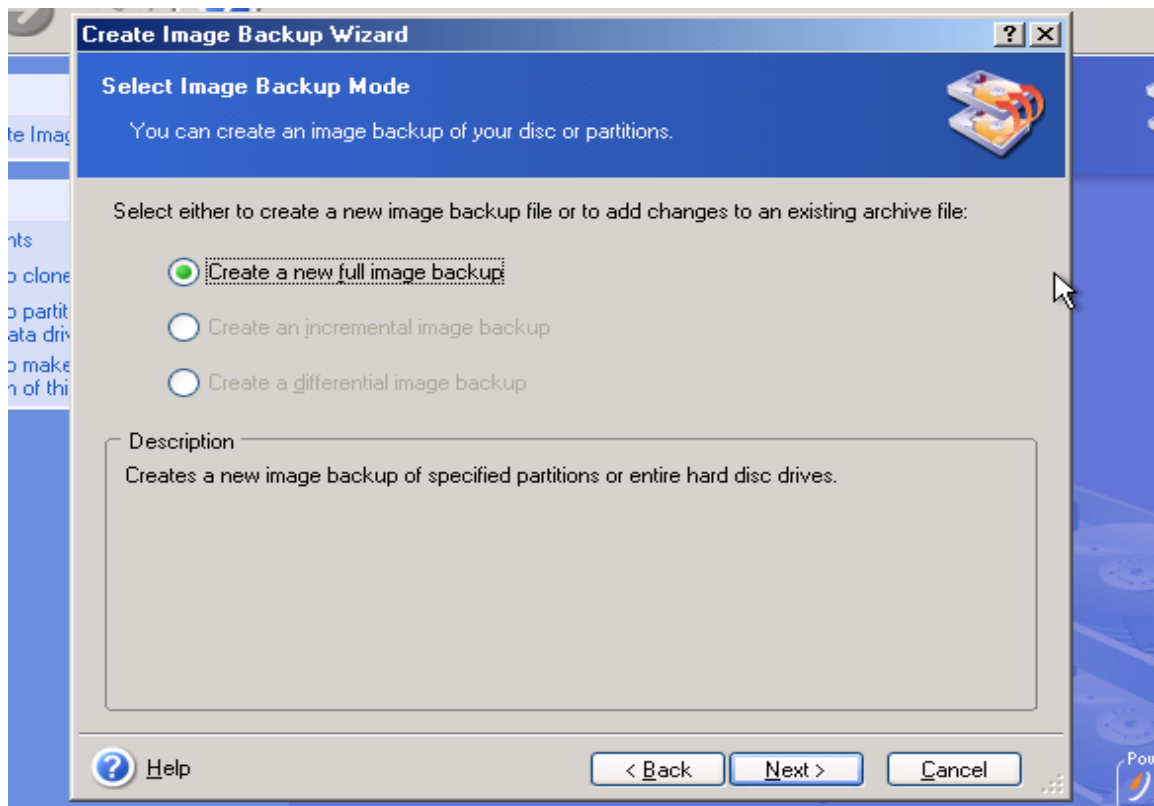

Select system drive that we want backup

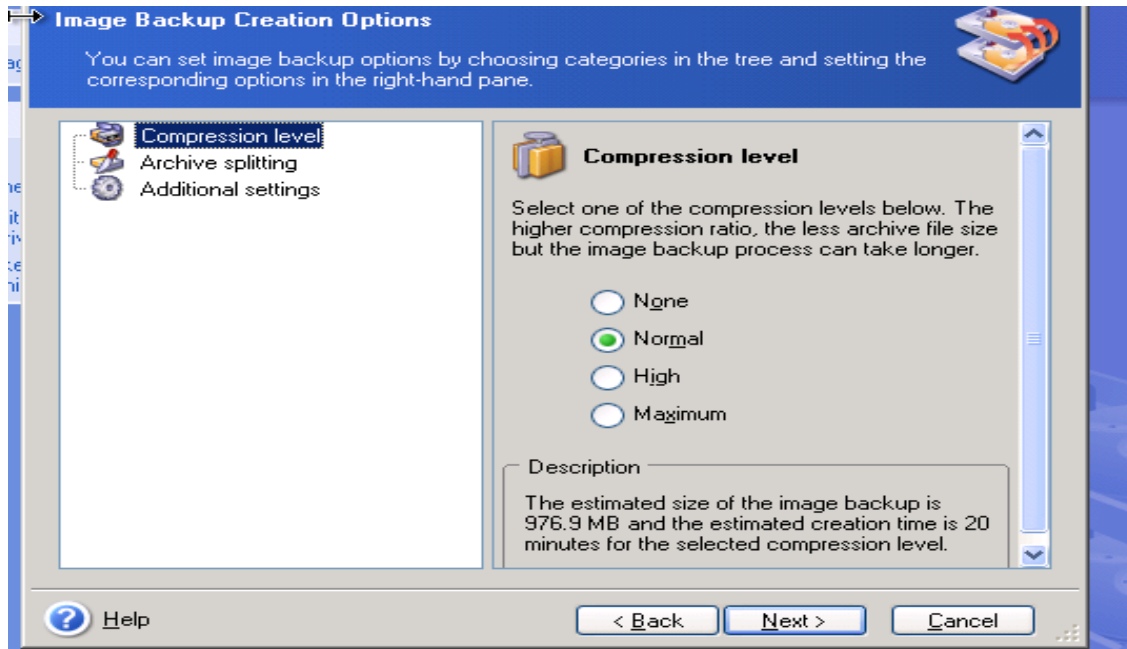

Give name to file

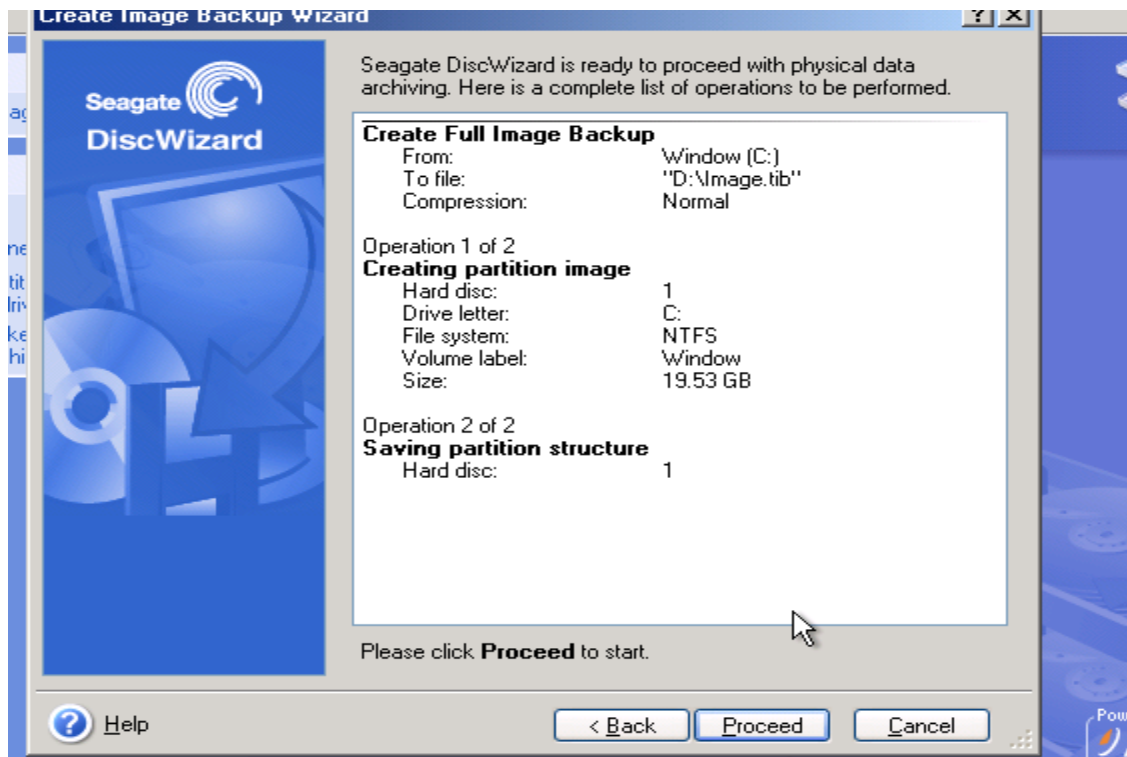

Choose create full backup

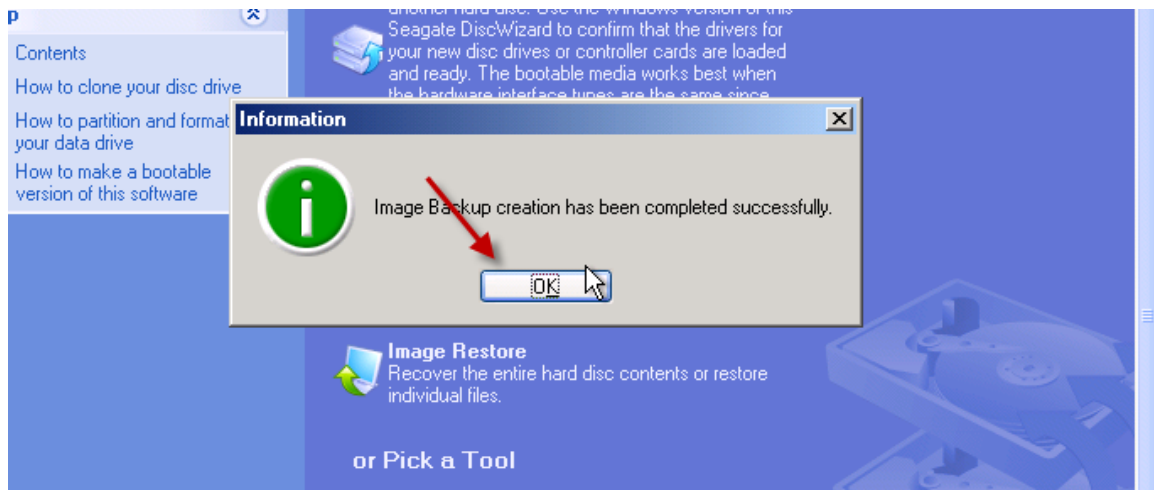

Choose compression level

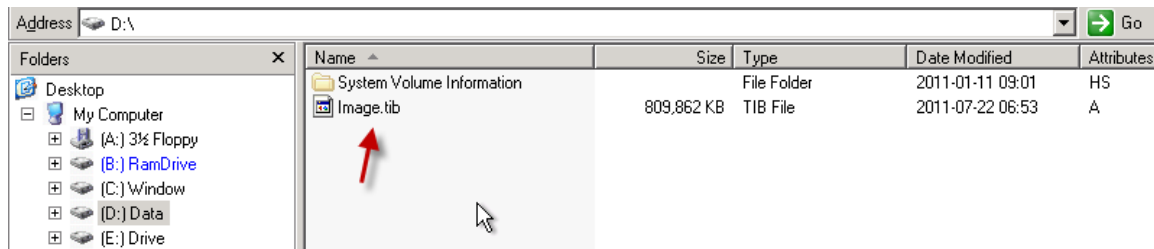

Process backup

Successfully backup

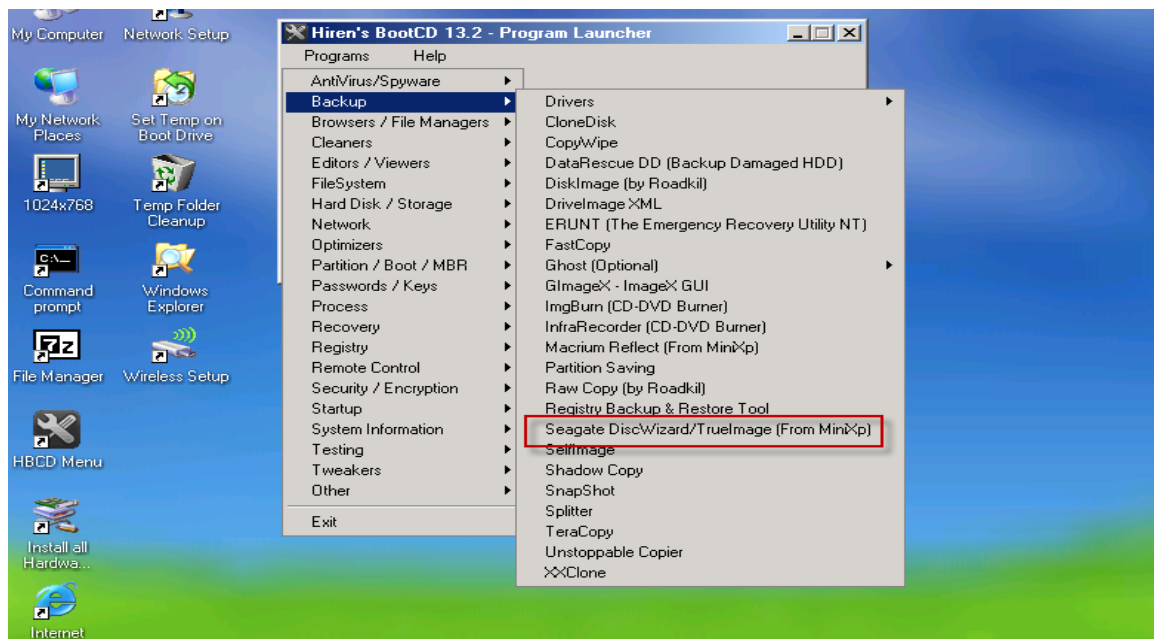

This is the image that we backup

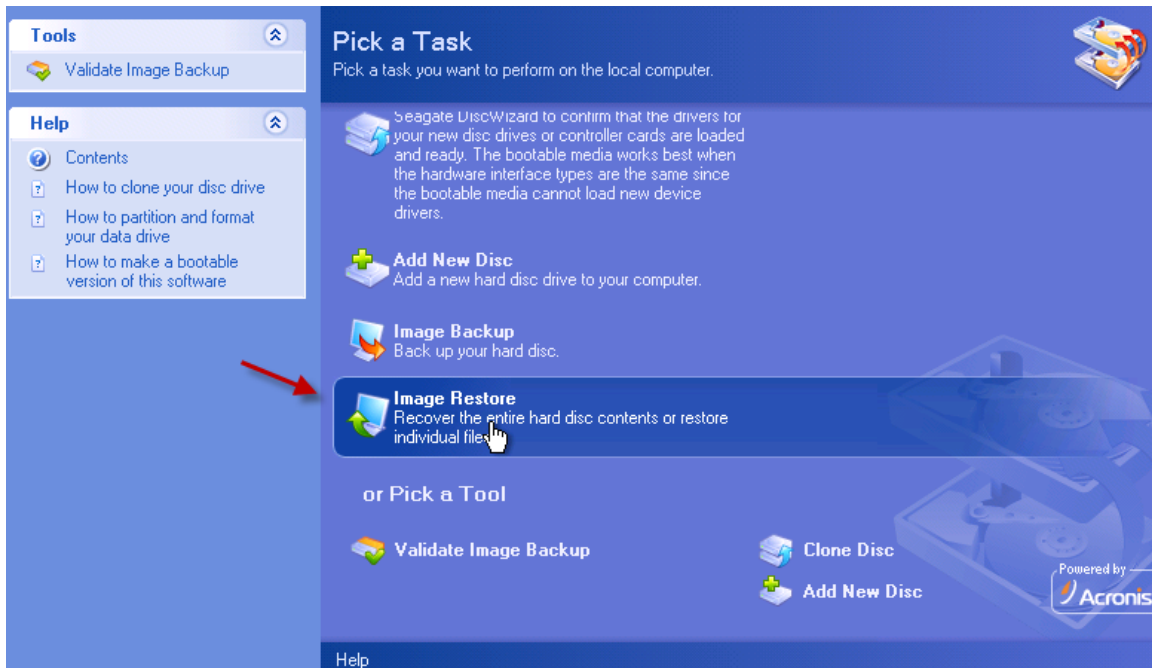

III. Restore OS

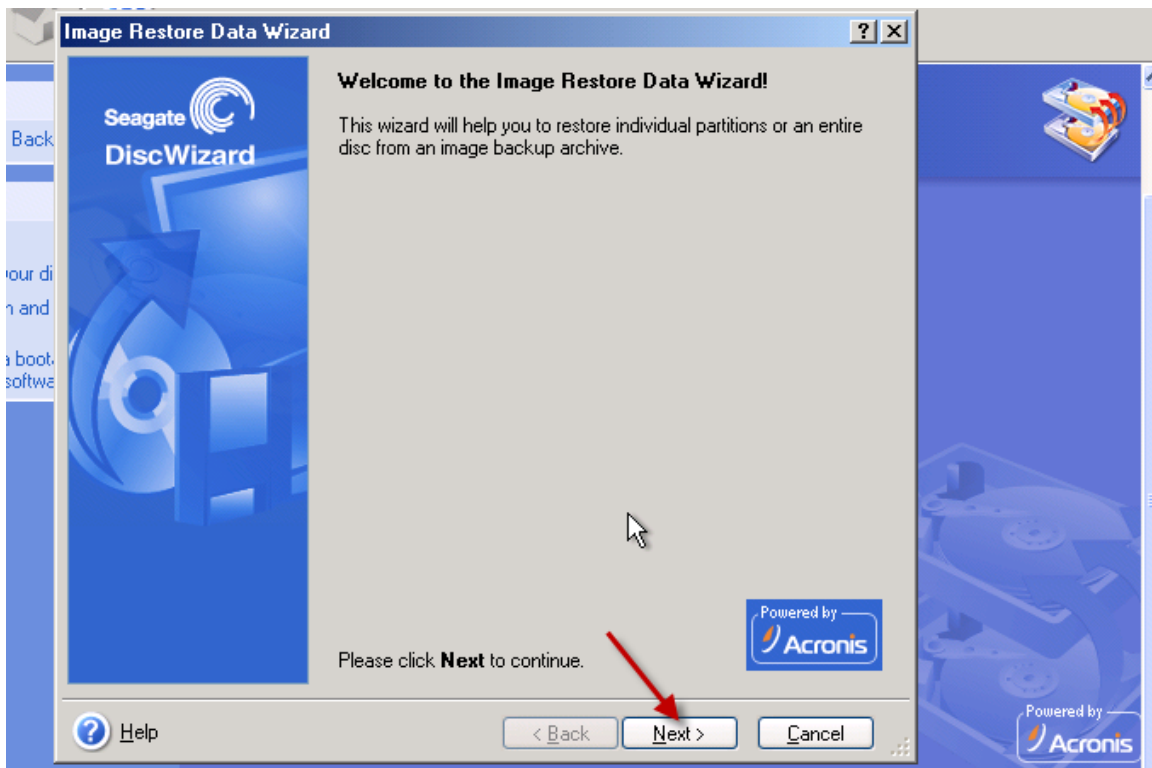

We could restore OS by boot Hiren boot from our flash drive and go to following option

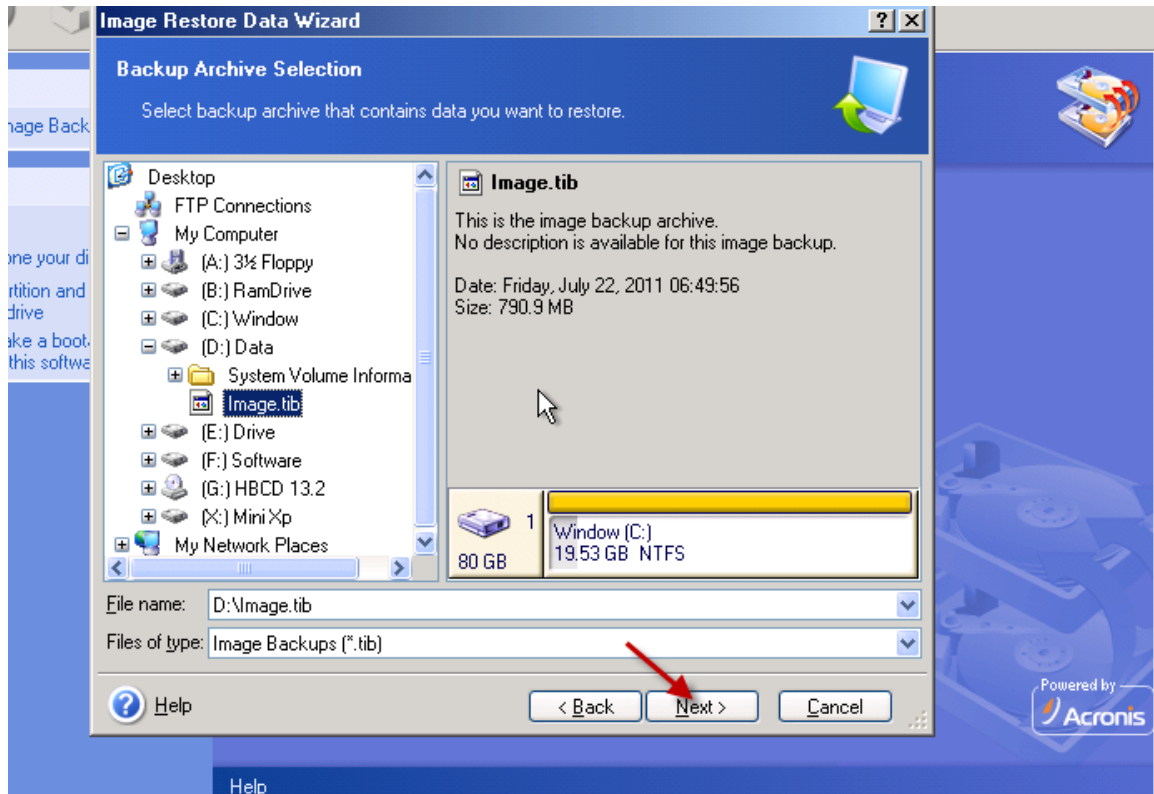

Select Image restores

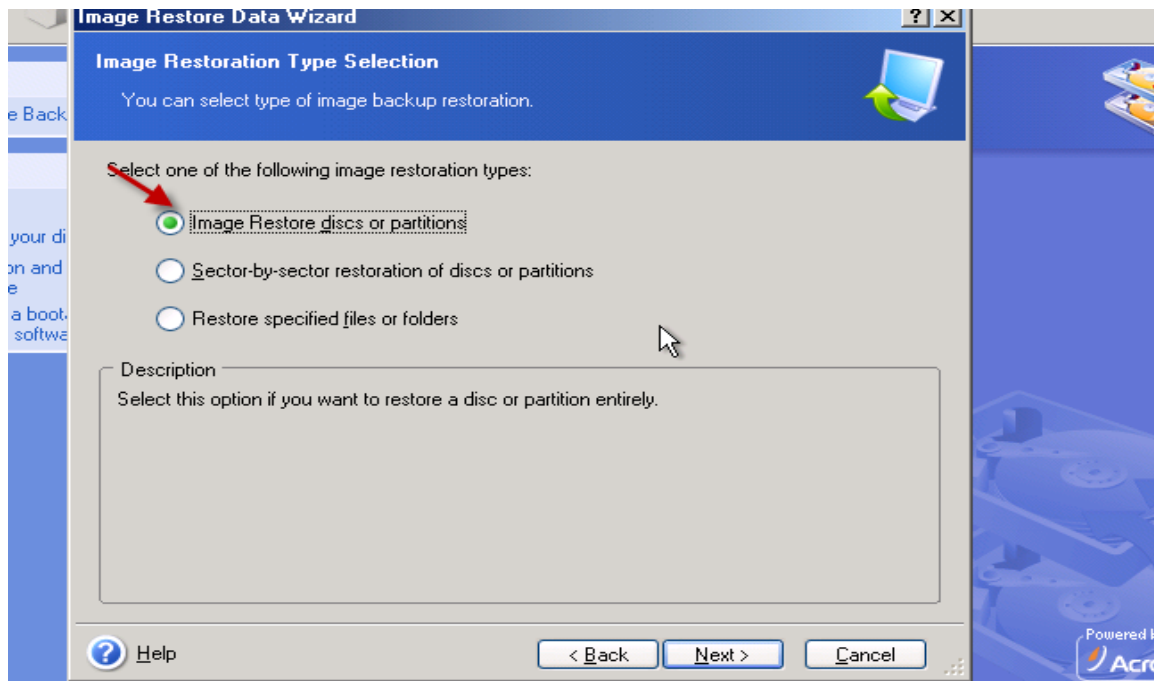

Choose next to restore

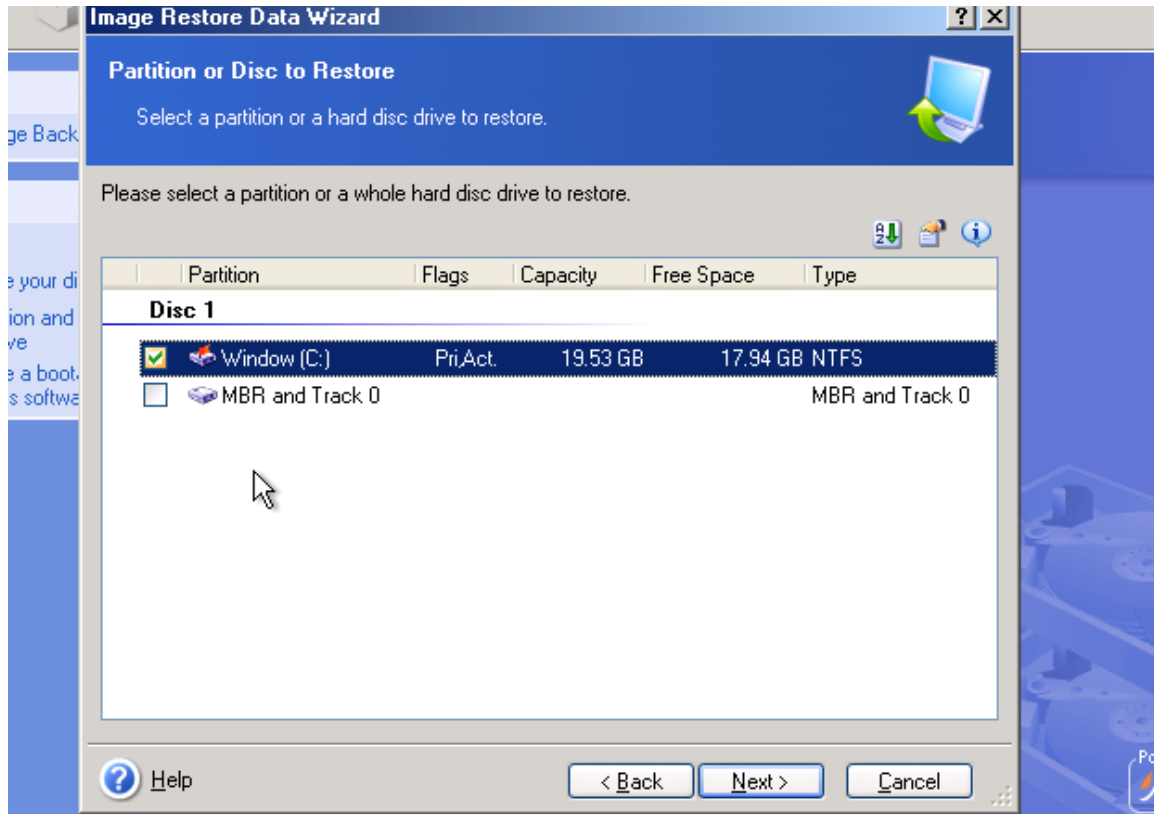

Choose source image that we have backup

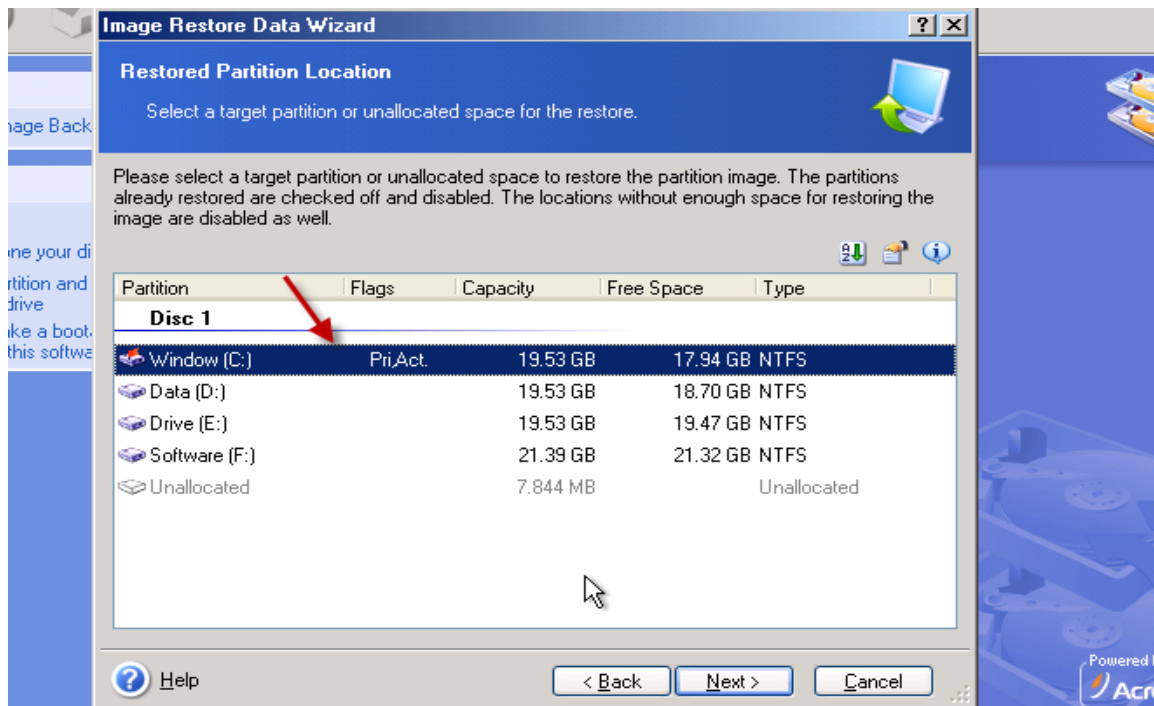

Choose restoration type

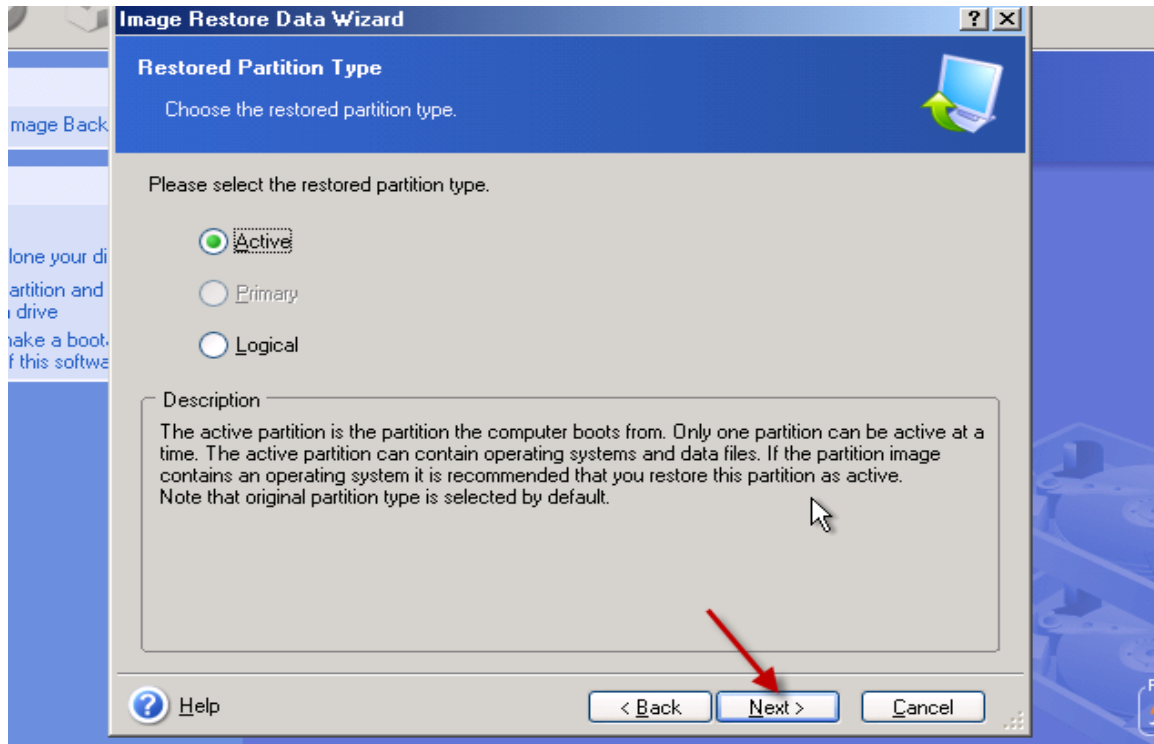

Select disk

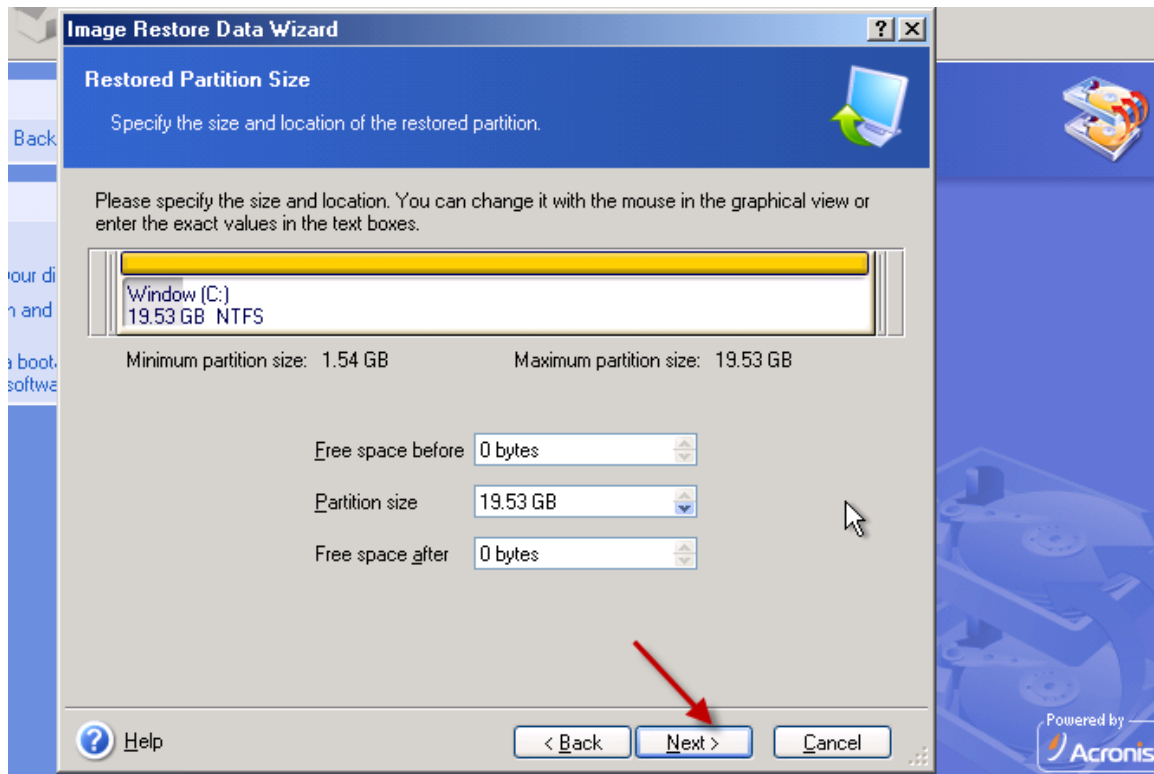

Select partition

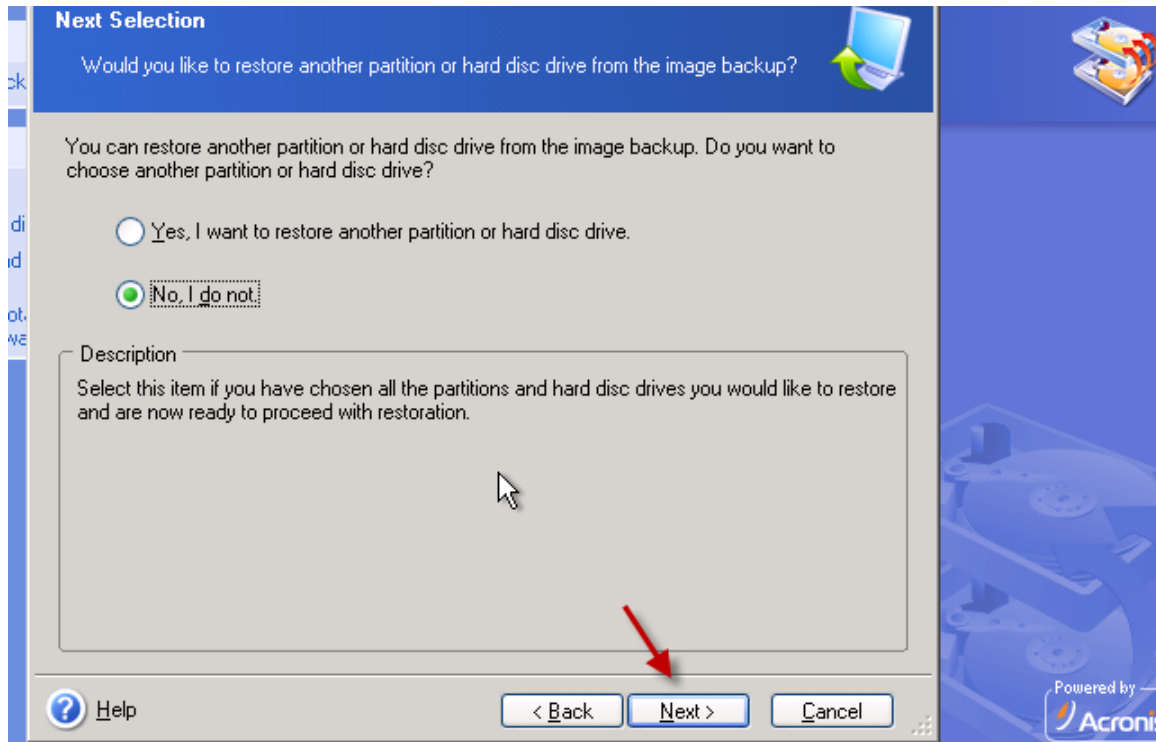

Select partition type

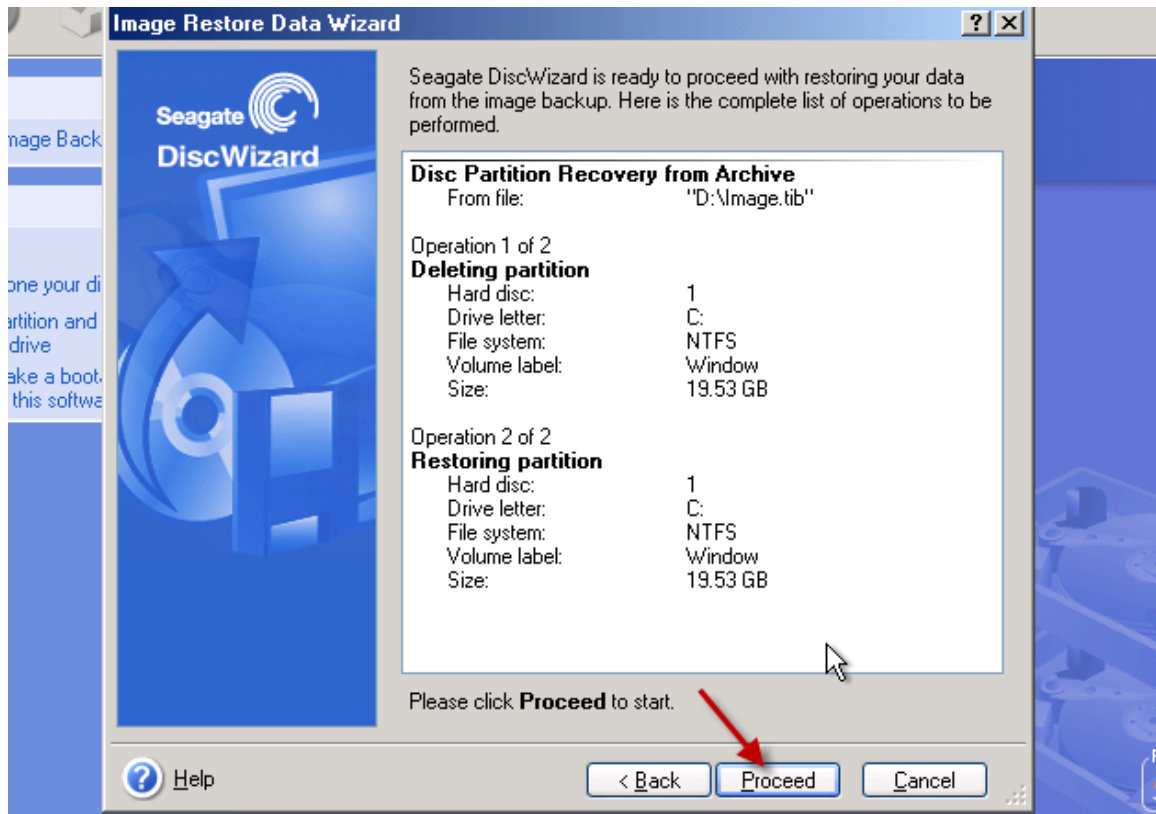

Select size

Next to continue

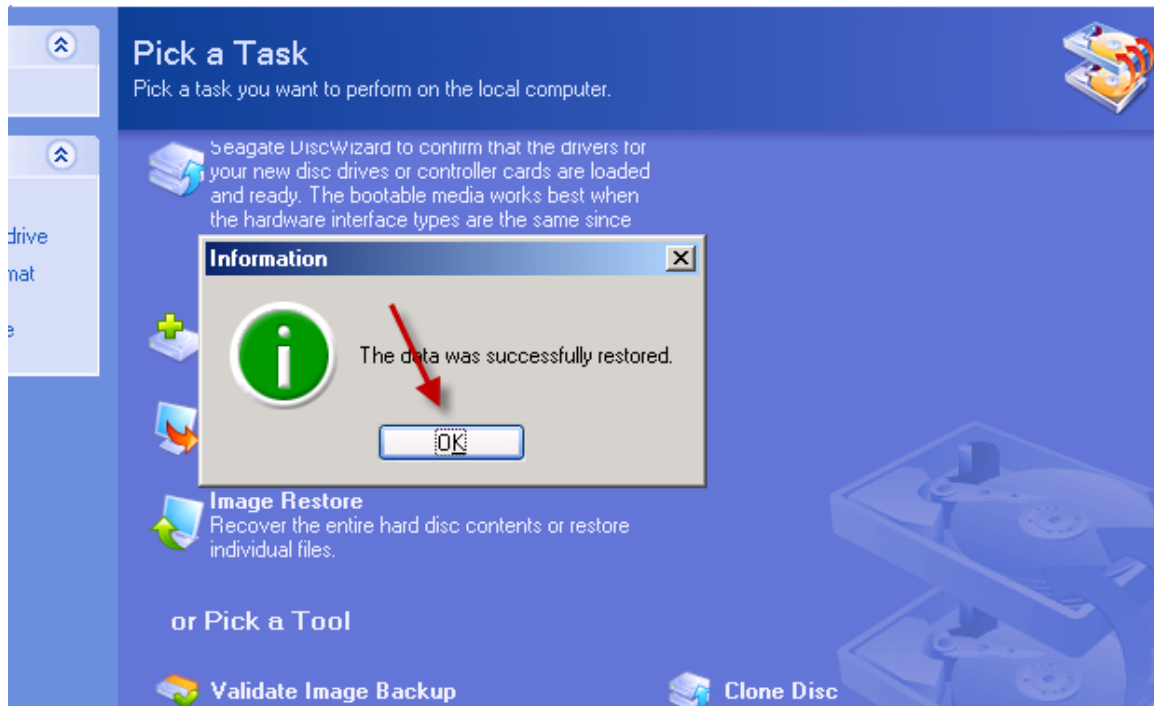

Process restores

Now we are success restore OS

We could restart and then boot from Hard disk, we will get the OS that we have had before

Finish
